Abstract of the Invention

1. The new abstract filed 7/2/2007 has been considered and entered.

The Specification

2. The amendment of the specification filed 7/2/2007 has been considered and entered.

Allowable Subject Matter

3. Claims 1-5 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Claim 1 recites method for determining a reclose time of a circuit breaker on an electric network, said network comprising

said determination of said reclose time being characterized in that it also comprises the following steps:

calculating, for two separate phases called first and second phases, the voltage difference (ULAB, ULAC, ULBC) between the line side contact and ground for said first phase, and the voltage difference between the line side contact and ground for said second phase, the calculation being made for each pair of separate phases,

calculating the voltage difference (USAB, USAC, USBC) between the source side contact and ground for said first phase, and the voltage difference between the source side contact and ground for said second phase, the calculation being made for each pair of separate phases,

determining said reclose time on the basis of said voltage differences.

The references of record do not teach or suggest the aforementioned limitations, nor would it be obvious to modify those references to include such limitations.
